Marker for ceramic decoration®

Pens with vitrifiable ceramic ink for ceramics and glass decoration

Perfectly emulsified inks allow a strokesolid and uniform designs decorate getting very defined even with small details and getting results brush effect. Ideal for illustrations.

The inks are pigmented ceramic colors high performance results obtained clean, very intense and bright.

Wide range of metallic tones standards and developed for both long cycles of traditional cooking and for industrial short courses. For decoration on non-porous surfaces (ceramic enamel cooked, glass, metal sheet) and recommended for porous surfaces apply primer before use.

Developed for use in two temperatures, independent used cooking cycle. For the third firing decoration 850 (cooking range between 800 ° and 900 °) and high decoration (cooking range between 950 ° to 1200 °)

The inks are combined with lead free flux so the make fully optimal for decorating china and earthenware.

Pen with metal ball and internal flow control valve for mixing and well dosed supply providing ink to the tip, getting a solid and uniform line.

Medium-fast ink drying that ensures no unnecessary decoration stops. Easily cleaned with a cloth or paper slightly moistened with water. When the trace is not continuous remove tip, clean it with water and dry and proceed as if it were a new tip.

Presented in three sizes: 2mm tip for fine lines and defined tip, 4mm thick strokes and fills and 1mm for writing.
